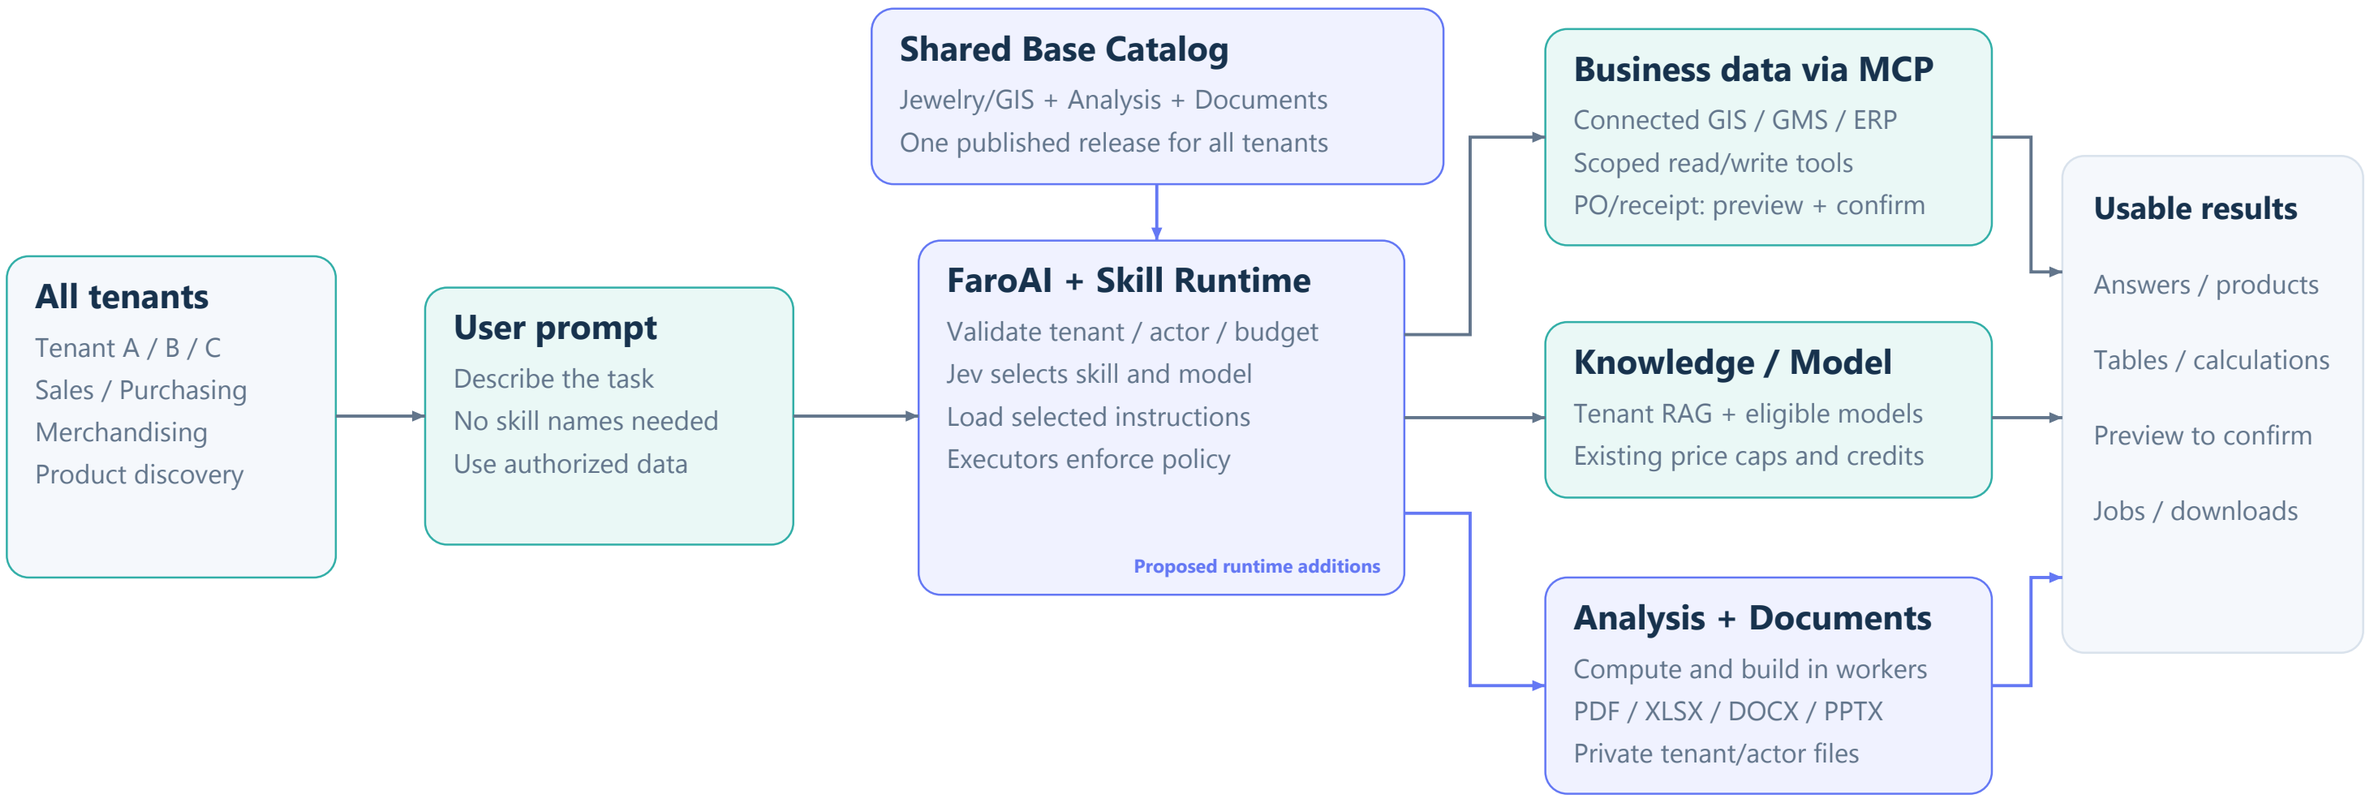
One Base Skill release for every tenant

Executive view: shared workflows with separate tenant data, permissions and budgets



Value to measure

Faster completed tasks | Less repeated prompting and rework | Measure cost per completed task

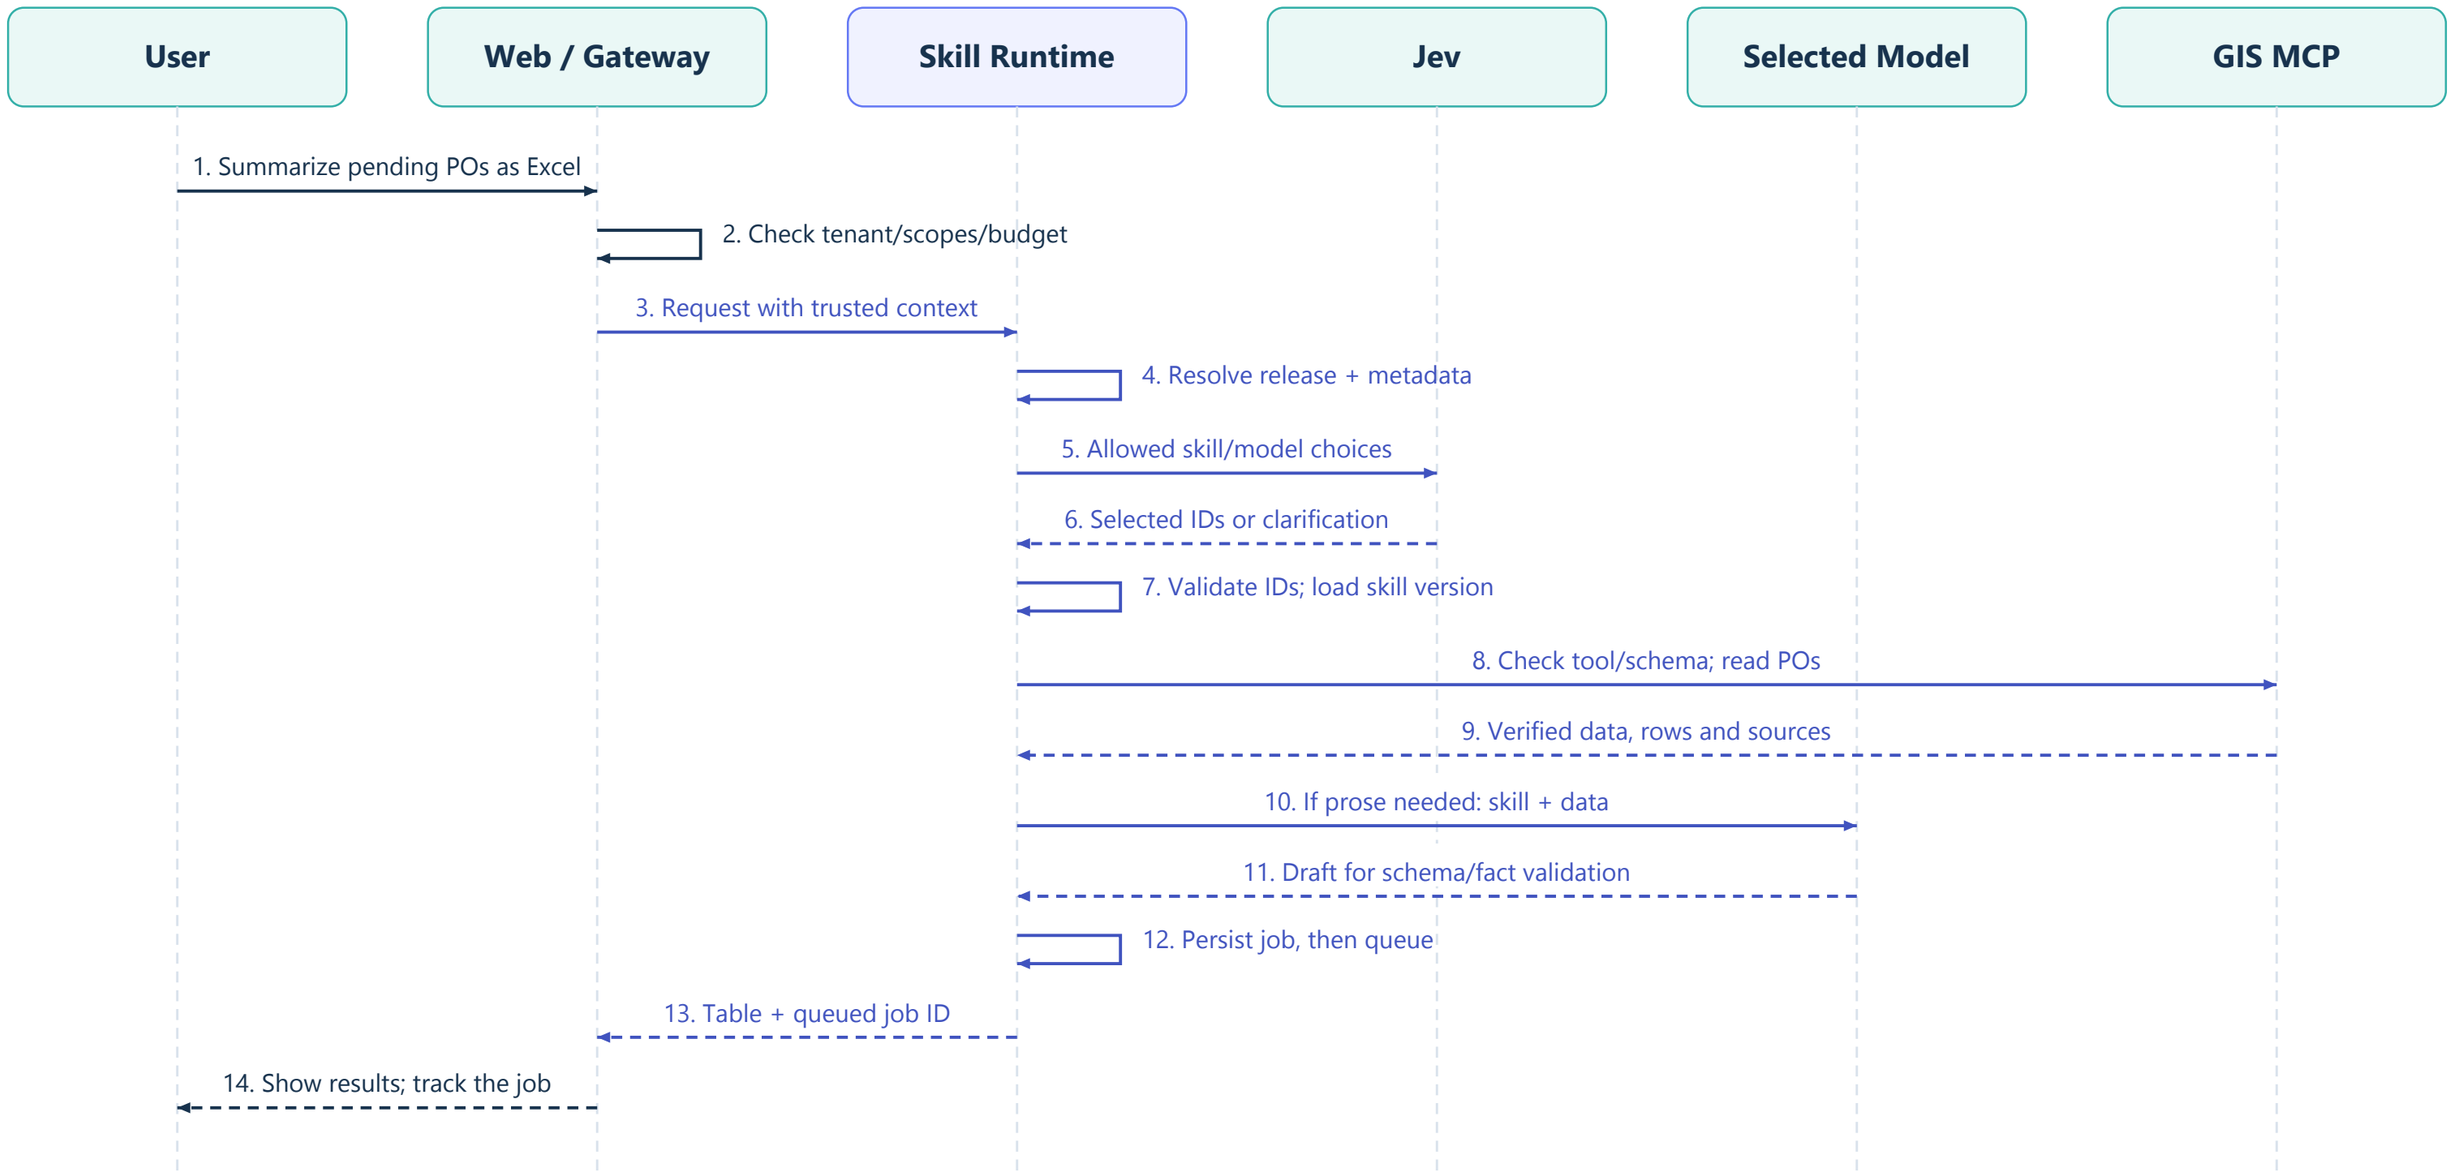
Key policy

Base Skills do not merge tenant data or grant additional MCP or business-approval rights.

Blue: proposed additions • Teal: existing capabilities reused/extended • Full scope delivered in phases

Sequence 1/2: Select skills and read data

Composition-phase example: PO Search / Analysis / XLSX; no PO creation or approval

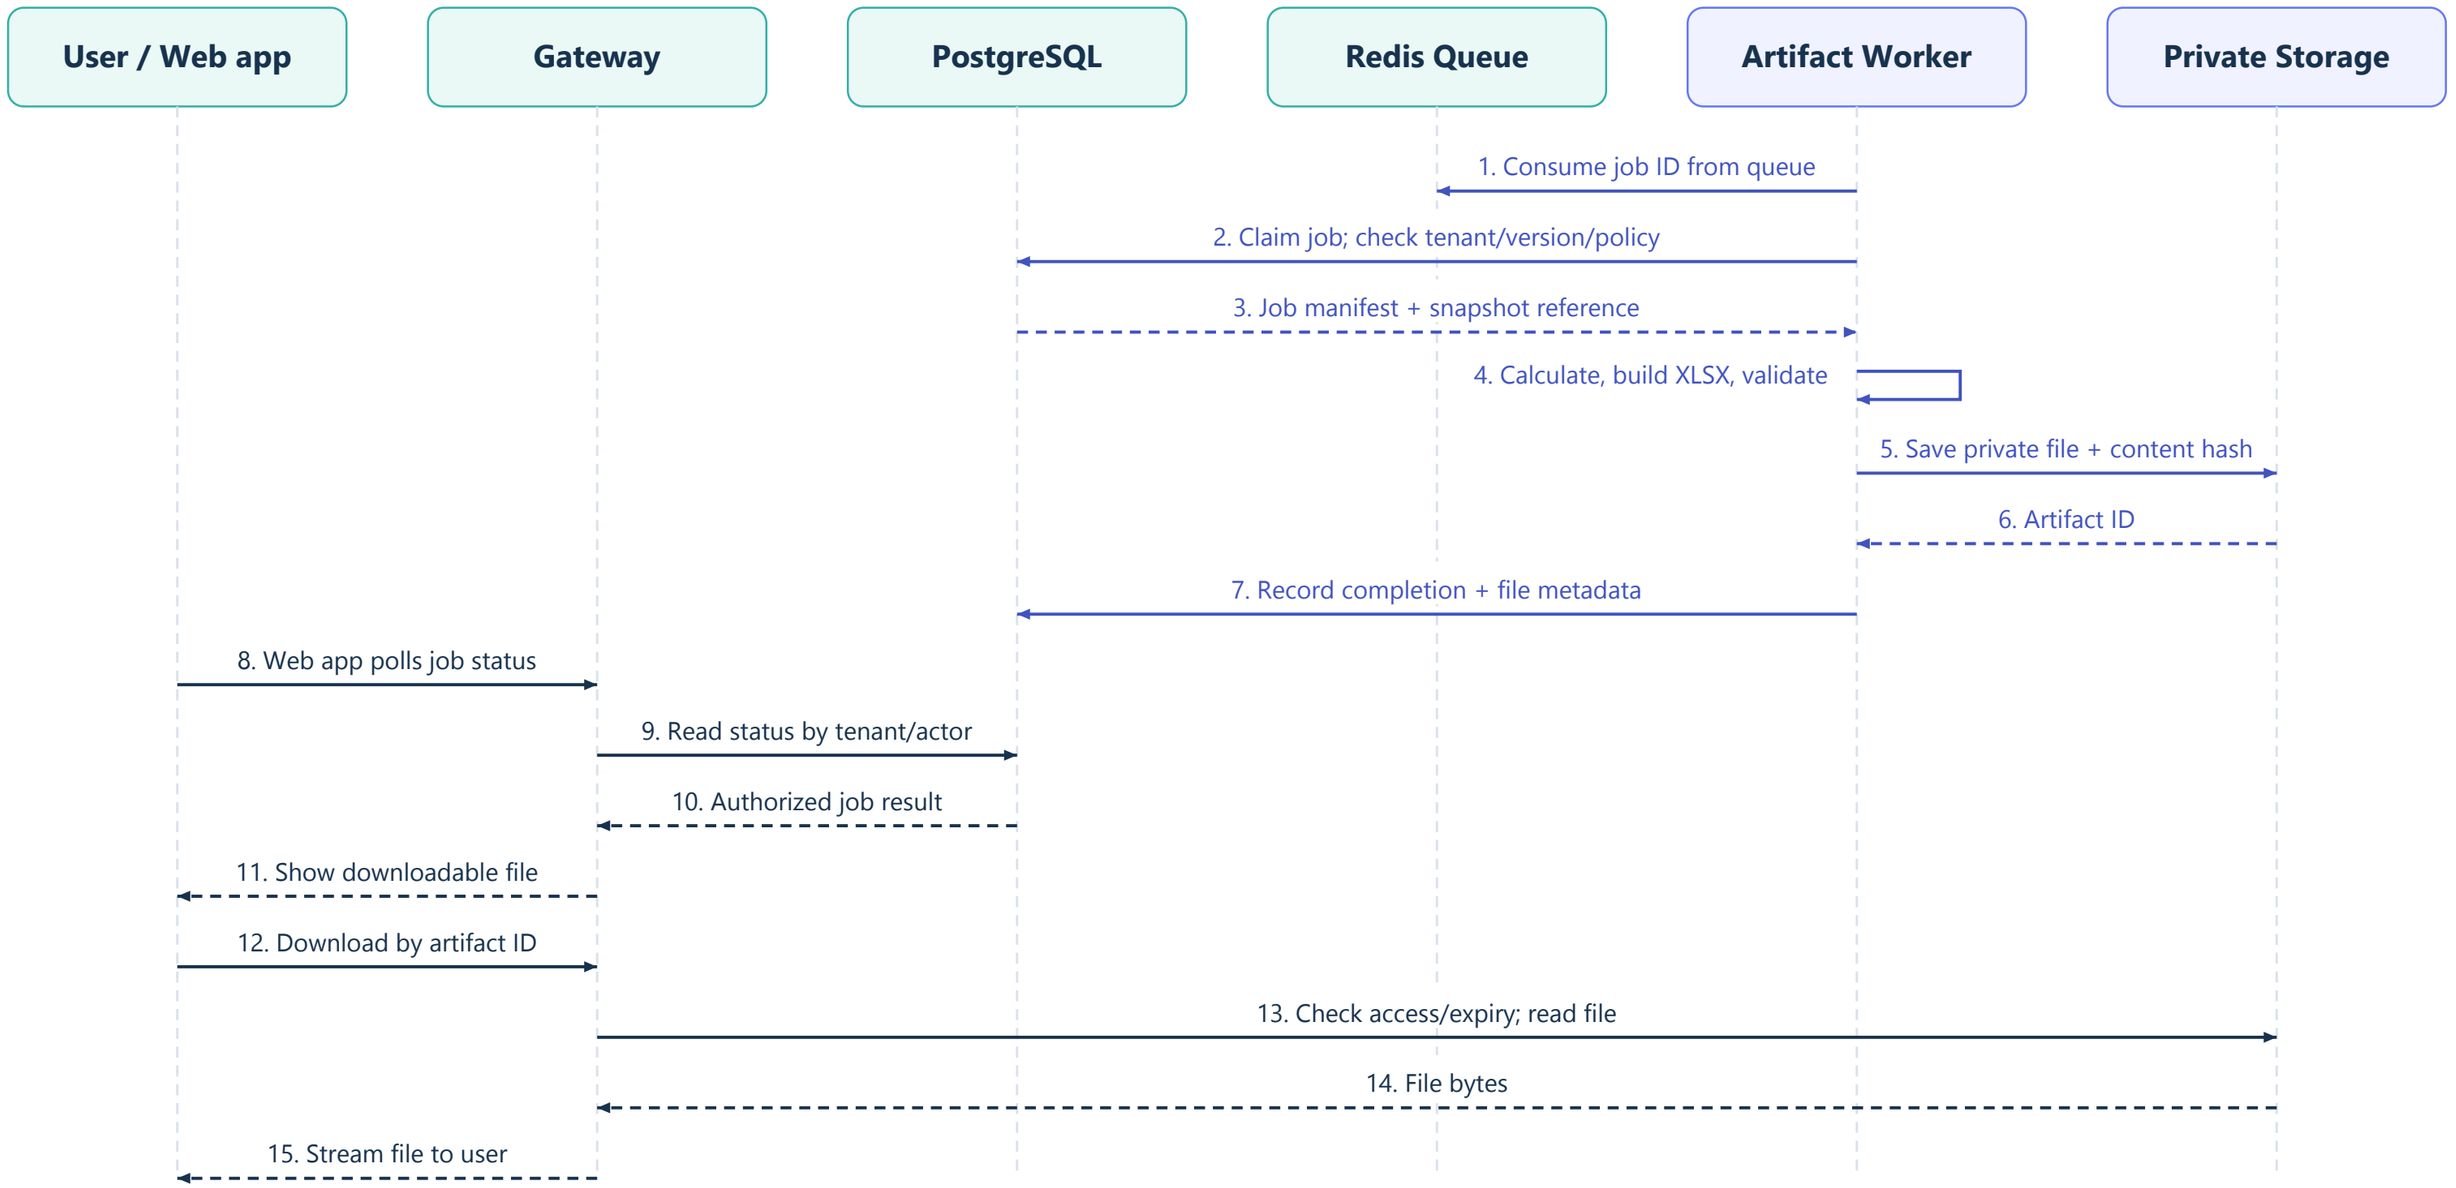


Missing permission, model, tool or data

Stop before execution and explain or clarify. The model has no independent mutation authority.

Sequence 2/2: Background jobs and private files

Continues from the queued job: PostgreSQL owns durable state; Redis coordinates delivery; Gateway serves downloads



Read/artifact tasks and business writes have distinct policies

Catalog create retains direct policy; PO/receipt require preview / confirm / re-preview. No automatic training capture.
